Random Processes in Physical Systems Charles Whitney

Introduces the reader to applications of computer programs that permit the manipulation of simulated physical systems, unlocking the potential for dramatic insights in the fields of physics, chemistry and statistics. Divided into four sections, it opens with an introduction to pseudo-random numbers and discusses the concept of the "random walk" as well as the excitation of atoms whose energy arrives in discrete quanta. Sample listings of computer programs for some of the key calculations are included. Section 2 describes a few of the most important processes that take place in the continuum of time, especially the scattering of photons in a gas and the "Brownian motion" of small particles. The third section applies these modeling techniques to the behavior of more complex systems and points the way to what promises to be a major use of computers in the future. Section 4 introduces the application of randomizing methods to the solution of statistical problems such as curve-fitting and error analysis. Using computer methods modeled on the rules of gambling, it promises to be a milestone in the field of physics education.

From reader reviews:

Lee Durfee:

The book Random Processes in Physical Systems can give more knowledge and also the precise product information about everything you want. Exactly why must we leave the great thing like a book Random Processes in Physical Systems? Some of you have a different opinion about publication. But one aim in which book can give many facts for us. It is absolutely appropriate. Right now, try to closer together with your book. Knowledge or facts that you take for that, you can give for each other; you can share all of these. Book Random Processes in Physical Systems has simple shape however, you know: it has great and massive function for you. You can search the enormous world by open and read a book. So it is very wonderful.

Marcia Eberhart:

What do you in relation to book? It is not important to you? Or just adding material when you really need something to explain what yours problem? How about your extra time? Or are you busy person?
