John M. Goodman

Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science) John M. Goodman

Space weather has an enormous influence on modern telecommunication systems even though we may not always appreciate it. We shall endeavor throughout this monograph to expose the relationships between space weather factors and the performance (or lack thereof) of telecommunication, navigation, and surveillance systems. Space weather is a rather new term, having found an official expression as the result of several government initiatives that use the term in the title of programs. But it is the logical consequence of the realization that space also has weather, just as the lower atmosphere has weather. While the weather in space will influence space systems that operate in that special environment, it is also true that space weather will influence systems that we understand and use here on terra firma. This brings space weather home as it were. It is not some abstract topic of interest to scientists alone; it is a topic of concern to all of us. I hope to make this clear as the book unfolds. Why have I written this book? First of all, I love the topic. While at the Naval Research Laboratory (NRL), I had the opportunity to do research on many topics including: Thomson scatter radar and satellite beacon studies of the ionosphere, utilization of the NASA Gemini platform for ionospheric investigations, microwave radar propagation studies, I-IF signal intercept and direction-finding experiments, and multi-disciplinary studies of certain physical phenomena relevant to weapon systems development.

From reader reviews:

Ruben Martin:

Nowadays reading books become more and more than want or need but also be a life style. This reading addiction give you lot of advantages. Associate programs you got of course the knowledge the actual information inside the book which improve your knowledge and information. The data you get based on what kind of book you read, if you want attract knowledge just go with education and learning books but if you want really feel happy read one along with theme for entertaining such as comic or novel. The actual Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science) is kind of reserve which is giving the reader unforeseen experience.

James Oliver:

Reading a publication tends to be new life style with this era globalization. With examining you can get a lot of information that can give you benefit in your life. With book everyone in this world could share their idea. Books can also inspire a lot of people. Plenty of author can inspire all their reader with their story or even their experience. Not only situation that share in the guides. But also they write about the knowledge about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors nowadays always try to improve their proficiency in writing, they also doing some analysis before they write on their book. One of them is this Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science).

James Fulk:

Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science) can be one of your beginner books that are good idea. We recommend that straight away because this publication has good vocabulary which could increase your knowledge in words, easy to understand, bit entertaining but delivering the information. The copy writer giving his/her effort that will put every word into enjoyment arrangement in writing Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science) although doesn't forget the main position, giving the reader the hottest as well as based confirm resource information that maybe you can be considered one of it. This great information can certainly drawn you into new stage of crucial imagining.

Richard Jimenez:

Is it anyone who having spare time subsequently spend it whole day by simply watching television programs or just lying on the bed? Do you need something new? This Space Weather & Telecommunications (The Springer International Series in Engineering and Computer Science) can be the solution, oh how comes? It's a book you know. You are so out of date, spending your time by reading in this completely new era is common not a geek activity. So what these guides have than the others?
