Machine Learning in Java

Bostjan Kaluza

Machine Learning in Java Bostjan Kaluza

Design, build, and deploy your own machine learning applications by leveraging key Java machine learning libraries

About This Book

- Develop a sound strategy to solve predictive modelling problems using the most popular machine learning Java libraries
- Explore a broad variety of data processing, machine learning, and natural language processing through diagrams, source code, and real-world applications
- Packed with practical advice and tips to help you get to grips with applied machine learning

Who This Book Is For

If you want to learn how to use Java's machine learning libraries to gain insight from your data, this book is for you. It will get you up and running quickly and provide you with the skills you need to successfully create, customize, and deploy machine learning applications in real life. You should be familiar with Java programming and data mining concepts to make the most of this book, but no prior experience with data mining packages is necessary.

What You Will Learn

- Understand the basic steps of applied machine learning and how to differentiate among various machine learning approaches
- Discover key Java machine learning libraries, what each library brings to the table, and what kind of problems each are able to solve
- Learn how to implement classification, regression, and clustering
- Develop a sustainable strategy for customer retention by predicting likely churn candidates
- Build a scalable recommendation engine with Apache Mahout
- Apply machine learning to fraud, anomaly, and outlier detection
- Experiment with deep learning concepts, algorithms, and the toolbox for deep learning
- Write your own activity recognition model for eHealth applications using mobile sensors

In Detail

As the amount of data continues to grow at an almost incomprehensible rate, being able to understand and process data is becoming a key differentiator for competitive organizations. Machine learning applications are everywhere, from self-driving cars, spam detection, document search, and trading strategies, to speech recognition. This makes machine learning well-suited to the present-day era of Big Data and Data Science. The main challenge is how to transform data into actionable knowledge.

Machine Learning in Java will provide you with the techniques and tools you need to quickly gain insight

from complex data. You will start by learning how to apply machine learning methods to a variety of common tasks including classification, prediction, forecasting, market basket analysis, and clustering.

Moving on, you will discover how to detect anomalies and fraud, and ways to perform activity recognition, image recognition, and text analysis. By the end of the book, you will explore related web resources and technologies that will help you take your learning to the next level.

By applying the most effective machine learning methods to real-world problems, you will gain hands-on experience that will transform the way you think about data.

Style and approach

This is a practical tutorial that uses hands-on examples to step through some real-world applications of machine learning. Without shying away from the technical details, you will explore machine learning with Java libraries using clear and practical examples. You will explore how to prepare data for analysis, choose a machine learning method, and measure the success of the process.

From reader reviews:

Daniel Starnes:

Nowadays reading books become more than want or need but also work as a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge even the information inside the book that improve your knowledge and information. The knowledge you get based on what kind of publication you read, if you want send more knowledge just go with education books but if you want sense happy read one together with theme for entertaining like comic or novel. The actual Machine Learning in Java is kind of book which is giving the reader erratic experience.

Shirley Nichols:

The reserve untitled Machine Learning in Java is the e-book that recommended to you to see. You can see the quality of the reserve content that will be shown to a person. The language that publisher use to explained their way of doing something is easily to understand. The article author was did a lot of study when write the book, hence the information that they share to you is absolutely accurate. You also could get the e-book of Machine Learning in Java from the publisher to make you a lot more enjoy free time.

Charles Hopper:

You will get this Machine Learning in Java by go to the bookstore or Mall. Only viewing or reviewing it could to be your solve issue if you get difficulties for your knowledge. Kinds of this guide are various. Not only by means of written or printed but in addition can you enjoy this book through e-book. In the modern era including now, you just looking from your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still update. Let's try to choose right ways for you.

Mattie Priest:

That publication can make you to feel relax. This kind of book Machine Learning in Java was multi-colored and of course has pictures around. As we know that book Machine Learning in Java has many kinds or type. Start from kids until teens. For example Naruto or Private eye Conan you can read and believe that you are the character on there. Therefore , not at all of book are generally make you bored, any it makes you feel happy, fun and relax. Try to choose the best book in your case and try to like reading in which.
