## **Biomimetic Robotics**

Robotics is a rapidly growing branch of engineering dealing with the designing, modelling and application of robots. Biomimetics is bringing forth new breakthroughs in the field of bio-engineering and bio-inspired robotics. Biomimetic robotics has diverse applications and is a growing field of robotic engineering. It involves the principles and techniques of nanotechnology, fibre optics and other engineering methods for developing bio-morphic systems, artificial implants and bionic implants. Researches and case-studies by internationally acclaimed experts are collated to provide a comprehensive insight into the techniques, modules and the new challenges emerging in the field. It is helpful for students, researchers and professionals associated with robotic engineering and biomimetics.
